A WINNING FORMULA FOR EMT

Every little detail of every Bridgeport fitting is a big deal to us. Because we know error-free performance is a big deal for you. From initial design and testing to production and quality control, Bridgeport fittings are better because we pay better attention. If you want consistently superior quality in innovative products that install faster, you want Bridgeport. We take care of all the details so you can set the standard for quality on every job.

The Locknuts

- Extra tightening lugs accessible from all angles – easy installation
- Serrated on both sides for installation flexibility – cannot be improperly installed
- Serrated design provides increased continuity and has the ability to remove non-conductive coatings
- Two, full-cut threads spin on with one finger ease, help prevent cross threading and resist jumping threads when tightened

The Body

- Strong ribbed design for added strength
- Smooth conduit entry and flush mounted screws allow easy conduit insertion
- Smooth radius throat prevents damage to conductor insulation
- Precision cast threads are perfectly matched between the fitting and locknut
- Locknuts are threaded $\frac{3}{4}$ of the way onto the fitting to prevent disassembly in transit
- Ball Burnished finish closes surface porosity, reduces mechanical friction, enhances corrosion protection, and gives a characteristic shine

The Screws

- Captive screws prevent disassembly while in transit and save installation time
- Deep slots minimize driver slippage
- Tri-Drive screws can accommodate three different types of drivers – Phillips, Straight Blade, and Robertson (square)

The Dimensional Consistency

- Precision zinc die casting ensures all fittings are defect free and consistent from one fitting to the next
- Fittings are exact-to-size so every part fits perfectly every time

The Corrosion Protection

- Solid zinc fittings remain rust free even if scratched or nicked
- Bridgeport Zinc has inherent corrosion protection throughout

The Function Advantages

- Inherent surface smoothness and lubricity not found in steel fittings
- Fitting for fitting, die cast zinc is lighter than steel for easier material handling

The Craftsmanship

- The Bridgeport and Regal traditions of excellence have led the industry in quality for nearly a century
- Quality assurance, continuous in process inspections of all operations and product
- QUALITY - Made in the U.S.A.

The Packaging

- Heavy duty corrugated cardboard packaging is strong and durable, top loading and clearly labeled with part numbers, description, and bar coded, along with third party certifications

Quality comes in full selection.

The one thing you need for every EMT application: Bridgeport

OTHER INNOVATIONS FROM BRIDGEPORT

◀ Mighty-Merge® Combination Couplings

Transition fitting saves you the labor and material cost of installing and bonding a junction box, or the assembly time to make up a fitting that provides the necessary transition. Patented.

Mighty-Rite® Split Grounding Bushings ▶

Mighty-Rite's hinged design and adjustable grounding lug deliver installation flexibility on every job. Aluminum alloy lug. Patented.

◀ Mighty-Bond® Intersystem Ground Rod Bridge Clamp

Grounding Products are unique, patent-pending products designed for low cost and easy use. Precision machined bodies and stainless steel screws provide the optimum in performance and appearance. Patented.

Mighty-Seal® Conduit Sealing Bushings ▶

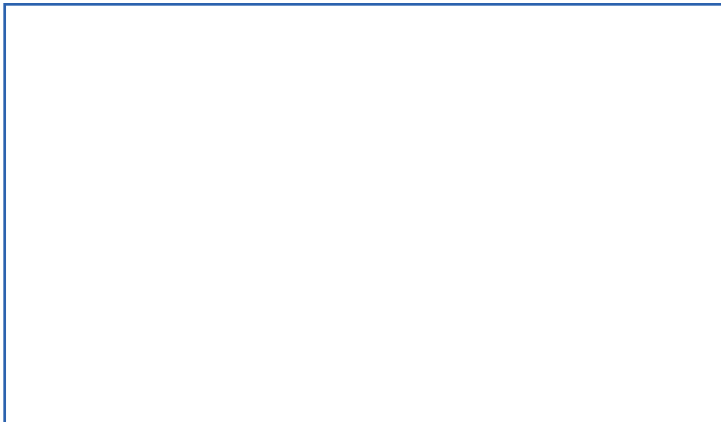

Conduit Sealing Bushing (CSB & CSBF) product line is designed for sealing concrete penetrations around rigid conduit installations in building foundations, ceilings, and walls against the intrusion of water. Factory certified.

THE BRIDGEPORT FITTINGS DIFFERENCE
